Jitendra Sharma

Software Developer | Java | Spring Boot | Angular | AI Agents | Microservices

8619840222 | jitendra.sharma7375@gmail.com | github.com/jitendrasharma7375 | linkedin.com/in/jitendrasharma7375

PROFESSIONAL SUMMARY

Software Developer with nearly 2 years of professional experience building enterprise applications with Java, Spring Boot, REST APIs and Angular. Recently built a multi-tenant AI SaaS platform with 23 LLM agents, retrieval-augmented generation (RAG) and Microsoft 365 integrations, and a shared, cloud-agnostic document storage and records-management service used across company products. Experienced in workflow-driven systems: approval workflows, dynamic forms, compliance, ticketing and procure-to-pay. Strong in Spring Security, Role-Based Access Control (RBAC), multi-tenancy, PostgreSQL and automated testing. Works closely with cross-functional teams to deliver scalable, production-ready software.

TECHNICAL SKILLS

Languages: Java (8 to 25), TypeScript, JavaScript (Node.js), SQL

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, Modular Monolith, Kafka, Redis, OAuth 2.0, JWT, RBAC, Flyway

AI and LLM: AI Agents, Tool Calling, Retrieval-Augmented Generation (RAG), Embeddings, Vector Search (pgvector), Anthropic Claude API, OpenAI Embeddings, Model Context Protocol (MCP), Microsoft 365 Copilot Agents, LLM Evaluation (Langfuse)

Frontend: Angular (up to 21, signals, standalone components), HTML5, CSS3, SCSS, Tailwind CSS, Bootstrap, Capacitor, Office.js Add-ins

Databases: PostgreSQL, MongoDB, MySQL

Cloud and Storage: Microsoft Azure (Azure Database for PostgreSQL, Blob Storage, Bot Service, Entra ID SSO, Microsoft Graph), AWS S3 (MinIO), Google Cloud Storage

Architecture and Concepts: Multi-Tenancy, Layered Architecture, Workflow Automation, Approval Workflows, Dynamic Forms, Records Management, Audit Trails, Caching, Async Processing, Offline-First Applications

Core Competencies: Problem Solving, Data Structures and Algorithms, System Design, Technical Documentation, Cross-functional Collaboration, Agile Development

Testing, DevOps and Tools: JUnit, Testcontainers, ArchUnit, Vitest, Docker, Git, GitHub, Bitbucket, Grafana, Postman, IntelliJ IDEA, Eclipse, VS Code, Cursor, Claude Code

PROFESSIONAL EXPERIENCE

Software Developer — **May 2026 - Present**

Smartdocs Business Solution — *Hyderabad, India*

KEY PROJECTS

Public Buyer | Multi-Tenant AI Platform for Public Procurement

Java 25, Spring Boot 4, Angular 21, PostgreSQL, pgvector, Anthropic Claude API, Microsoft Azure, Office.js

- Built a multi-tenant AI SaaS platform that helps government procurement officers review solicitations and bids, answer questions from agency policy and law, and draft procurement documents. It is a modular-monolith backend with 100+ REST controllers.
- Designed schema-per-agency multi-tenancy on PostgreSQL, with Flyway provisioning and migrating each agency's schema. Built agency onboarding with a self-service wizard, super-admin review, JWT authentication with refresh-token rotation, and Microsoft Entra ID SSO.
- Developed 23 AI agents, including Solicitation Reviewer, Obligation Extractor, Scope Writer, Protest Risk, Compliance Check and Cost and Price Analyst. They run on a tool-calling agent loop with per-task model routing, token budgets, rate-limit backoff and mandatory human approval of every draft.
- Implemented hybrid RAG search that combines pgvector embeddings with PostgreSQL full-text search over agency documents and a corpus of 390+ legal authorities. A citation guardrail verifies every quoted source.
- Built a conversational master agent that delegates work to specialist agents. Officers can use it from the web app, a Word and Outlook add-in (Office.js) that suggests tracked-change edits, and Microsoft Teams and Microsoft 365 Copilot through an Azure Bot bridge and 14 declarative Copilot agents.
- Published a Model Context Protocol (MCP) server and ChatGPT and Claude plugins. Built the document pipeline (PDF and Word extraction, OCR, chunking, embeddings), Office for the web editing, Microsoft Graph notifications and an audit log. Set up Langfuse LLM evaluations to choose the model for each task.
- Maintained quality with 5,000+ automated backend tests (JUnit, Testcontainers, ArchUnit) and 200+ Angular test suites.

Strata | Shared Document Storage and Records Management Service

Java 25, Spring Boot 4, Angular 21, PostgreSQL, Azure Blob Storage, AWS S3, Google Cloud Storage, ClamAV

- Built Strata, a central, governed document storage service that replaces the legacy SmartStore system for all company products. It is deployed on Azure with a REST API and an admin console.
- Implemented a storage-agnostic layer with adapters for Azure Blob Storage, AWS S3 and Google Cloud Storage. Supports shared or per-customer containers, with connection secrets encrypted using AES-GCM.
- Built a secure upload pipeline (upload intent, direct upload, then commit) with SHA-256 integrity checks, deduplication, ClamAV virus scanning, document versioning and time-limited read-only download links.

- Developed records-management features: document types with metadata, retention schedules with a daily keep, review or destroy check, legal holds, and defensible deletion that issues PDF/A-2b destruction certificates (Apache PDFBox, validated with veraPDF).
- Implemented a tamper-evident, hash-chained audit trail, idempotent APIs, a background job queue and role-based access with Microsoft SSO. Built the Angular admin console with a setup wizard and a developer guide; covered by 280+ backend and 680+ frontend tests.

Smartdocs Operating System | Resource Planning and Workforce Management

- Enhanced an enterprise resource management platform with project-level task management and a 3-week forecasting workflow that helps managers allocate resources by workload and availability.
- Developed workforce availability features enabling users to configure weekly working hours, schedules and weekend availability for accurate capacity planning.
- Contributed to an integrated attendance management system with clock-in and clock-out functionality for employee time tracking and workforce visibility.

Sentry | Compliance and Request Management Platform

- Worked on configurable Standard Operating Procedures (SOPs) containing workflow steps, dynamic form fields, version history and configurable approval matrices.
- Enabled structured request workflows for use cases including database access, IT requests, build deployments, IP whitelisting and other operational approvals.
- Contributed to compliance modules including incident declaration and risk registry, with approval routing driven by configurable SOP matrices.
- Implemented and enhanced dynamic forms and configurable approval workflows, enabling business teams to create and manage request processes without rigid form structures.

MIQ | Offline-First Field Workforce Application

- Built features in an Angular and Capacitor field workforce app for creating and managing equipment and assets, assigning them to workers, and delivering assigned work to worker-specific inboxes.
- Supported configurable workflow-based field operations, allowing workers to execute assigned actions, complete tasks, capture evidence and upload images from the field.
- Worked on offline-first capabilities to support field operations in environments with limited or intermittent network connectivity.

Jr. Software Developer **Nov 2024 - Apr 2026**
Smartdocs Business Solution *Jaipur, India*

KEY PROJECTS

Ethos | Ticketing and Work Management Platform

- Developed interactive dashboards in an enterprise ticket management system for ticket trends, resolution metrics, operational KPIs and workload visibility.
- Supported a high-volume environment handling 5,000+ tickets per month while improving UI responsiveness and API performance.
- Developed Daily Status Reporting, Forecasting and Standup Management modules supporting 70+ users, reducing Jira dependency and contributing to $5,000+ annual savings.

S-One | Procure-to-Pay (P2P) Automation Platform

- Contributed to an enterprise Procure-to-Pay automation platform processing 50,000+ invoices per month across multiple clients.
- Developed configurable multi-level approval workflows with role-based routing, parallel approvals and SLA-driven escalation mechanisms.
- Built Vendor Onboarding capabilities including document verification, duplicate detection and ERP master-data synchronization.
- Enhanced platform security with Multi-Factor Authentication (MFA), OAuth integrations and role-based access controls, and developed reporting for auditability and workflow visibility.

CLM | Contract Lifecycle Management Platform

- Supported configurable workflows across contract lifecycle stages (creation, tracking, approval) to improve approval tracking and process visibility.
- Integrated DocuSign for digital signatures and enhanced frontend and API interactions to streamline contract execution workflows.

EDUCATION

Master of Computer Applications (MCA) **2023 - 2025**
Vellore Institute of Technology, Bhopal *CGPA: 9.63 | Gold Medalist*

Bachelor of Computer Applications (BCA) **2020 - 2023**
University of Rajasthan, Jaipur *Percentage: 75.00%*

CERTIFICATIONS

Networking Basics (Cisco) | Java Collection Framework (Scaler)
